

General Settings - Server Locale and Time Zone

System Time Zone

default: (UTC) Etc - UTC

System Locale

default: en_US

System Date Format

default: dd-MM-yyyy hh:mm aa

Using Locale Date Format

☐

Enable User Locale Selection

☐

User Locale Options (Language code, separated by comma ',')

You can define the **system locale** (timezone and language) that Joget Workflow should use rather than using the server's default.

It is also possible to define the date format rather than using the default one.

By changing the locale, this would affect how date/time and language is presented system-wide.
