

## Set favicon for Userview

Put the following code in your Userview's settings (i.e. **Custom Javascript**) and change the path to your **favicon.ico** accordingly.

### Code

```
// Set the Favicon as the page is loading
$("#favicon").attr("href","/jw/plugin/our.theme.Theme/images/favicon.ico");

$(document).ready(function() {
    // Set the Favicon after page load, in case the above doesn't set it properly
    $("head").append('<link rel="shortcut icon" href="/jw/plugin/our.theme.Theme/images/favicon.ico"/>');
    // This might be required as well in some browsers
    $('link[rel="shortcut icon"]').attr('href','/jw/plugin/our.theme.Theme/images/favicon.ico');
}
```
