# JDBC Datalist Action
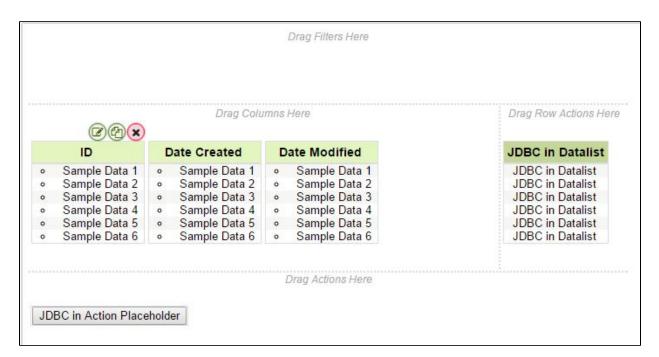

Figure 1 : Hyperlink in the row action placeholder and in the bulk action placeholder in the datalist builder

Figure 2 : JDBC Datalist Action Properties

| Name	Description
Label	Link / Button label.
Confirmation Message	Confirmation message before performing action.
Datasource	• Custom Datasource • Default Datasource By selecting **Default Datasource**, the database your Joget is currently using will be selected.
Custom JDBC Driver	Custom JDBC Driver. This field is required when **Custom Datasource** is selected in **Datasource** above.
Custom JDBC URL	Custom JDBC URL. This field is required when **Custom Datasource** is selected in **Datasource** above.
Custom JDBC Username	Custom JDBC Username. This field is required when **Custom Datasource** is selected in **Datasource** above.
Custom JDBC Password	Custom JDBC Password. This field is required when **Custom Datasource** is selected in **Datasource** above. ⓘ **Test the connection parameters** Click on the "Test Connection" button at the bottom of the page to quickly test out your configurations.

Query	Insert your SQL statement here. Use syntax like {id} in query to inject the selected row key.Use {uuid} to generate a unique id.

Sample

```
INSERT INTO app_fd_sample (id, c_clicked) VALUES ( {uuid}, {id} );
```

Sample

```
UPDATE app_fd_sample SET c_clicked = CONCAT(c_clicked, ',', {id}) WHERE id = '123';
```

(i) **How it works?**

The special parameters {id} and {uuid} will be replaced with actual values through the use of PreparedStatement.

As you can see from the example above, there is no need to encapsulate both of these special keywords with quotes.

Visibility Control

Configure JDBC Datalist Action > **Visibility Control**

Rules

Join Type	Field	Operator	Value	
And	rating	Greater Than	60	

Figure 3 : JDBC Datalist Action Properties - Visibility Control

Name	Description
Rules	Controls on when the action should appear based on the condition(s) set.
