Asset Management and Tracking

This is a simple Asset Management app that is developed using Joget Workflow v4 Enterprise App Generator.

The app allows the company to quickly and easily register their assets for tracking.

The asset registration is routed to the respective "Head of Department (HOD)" for approval. The "Approver" can request for clarification, approve or reject the request.

The app is completely free for anyone to use, modify and distribute.

You can extend the functionalities of the app to modify the asset form fields, add reminder notifications, deadlines or multi-level approvals process according to your preset budget amount, etc.
