# Add jQuery Tooltip to form

1. Use the following code to incorporate jQuery Tooltip into the form. Add a Custom HTML and add in the following code. Amend accordingly.

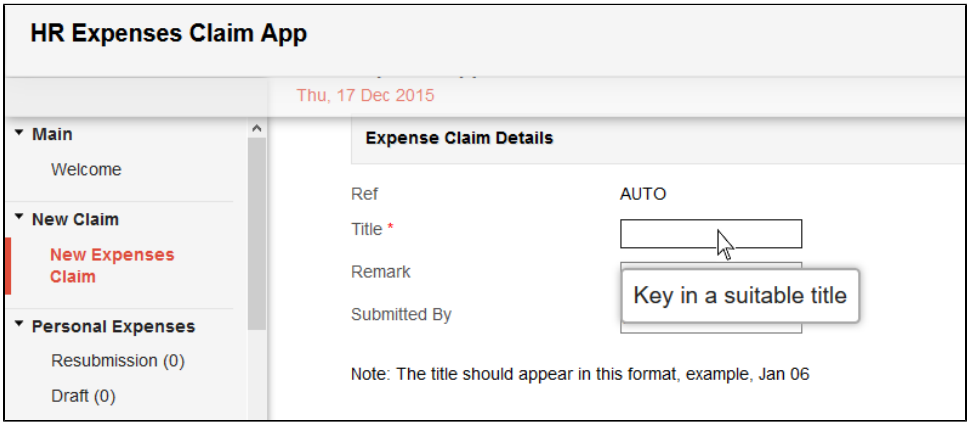

```
<script type="text/javascript">
$(function() {

//customize your hints here by specifying form element ID on the left and message on the right
messages = { 'title' : 'Key in a suitable title',
             'remark' : 'Extra note goes here'};

//do not modify anything below here.
$( document ).tooltip({
      items: "input",
      content: function() {
        var element = $( this );
        if( messages[$(element).attr("name")] ){
          return messages[$(element).attr("name")];
        }else{
          return false;
        }
      }
    });

});
</script>
```

2. The next time when someone hover over the field, the hint will show up.
