

Multi Select Box

Multi Select Box allows you to select multiple items with auto-complete behaviour. Multi Select Box is a useful replacement for the ordinary [SelectBox](#), particularly when there is a very long list of options to choose from. Options are displayed based on the user's input.

Configuration of Multi Select Box is the same as that of [SelectBox](#).

Property Editor

Edit Multi Select Box

Edit Multi Select Box > Choose Options Binder > Choose Validator > Workflow Variables
