Process Data Collector

Process Data Collector can be enabled at the App's level to allow SLA information to be gathered for statistical and analytic purpose.

You may enable the **Process Data Collector** plugin in your app's Plugin Default Properties.

Go to **Properties & Export** > **Set Plugin Default Properties** -> Choose **Process Data Collector** -> **Submit.**

What to configure?

There is no further configuration needed after the submission.

Once enabled, data will be written into **app_report_*** tables in your Joget database.
