Directory Form Binder

Introduction

The **Directory Form Binder** allows one to interact with the Directory Manager.

Directory Form Binder Properties

Configure Directory Form Binder

Name	Description
Type	Entity type that you would like to write/read.

> ⊘ **What's next?**
>
> After making the selection above, relevant entity attributes mapping will show up. All attributes need to be mapped to the form fields accordingly. Form field ID is expected in all the fields.
