  - Responsive Setting

## Introduction

Datalist Properties are where you configure some basic properties of the datalist.

## Datalist Properties

### Basic Properties

The screenshot shows the Joget Datalist Builder interface. At the top, there is a navigation bar with tabs: SOURCE, DESIGN, PROPERTIES (which is currently selected), PREVIEW, and SAVE. Below the navigation bar, the main area is titled "Basic Properties".

Property	Value
Datalist ID *	list_form1
Datalist name *	List - Form 1
Hide Page Size Selector	<input checked="" type="checkbox"/>
Page Size *	100
Order	ASC
Order By	ID
Description	(empty text area)
Use session to store list state?	<input type="checkbox"/>
Only show data when filters are submitted?	<input type="checkbox"/>
Consider filter value when get total size?	<input type="checkbox"/>

Below the "Basic Properties" section, there is a "Responsive Setting" section with the following note: "The following setting only applicable for theme supporting responsive UI." There is also a checkbox labeled "Disable responsive feature?".

Figure 1: Datalist Properties

Name	Description
Datalist ID	Datalist ID.
Datalist name	Datalist Name.
Hide Page Size Selector	Click the check box to hide the page size selector to the end users.
Page Size	<p>Default number of items to be displayed per page.</p> <ul style="list-style-type: none"> <li>● Default Size</li> <li>● 10</li> <li>● 20</li> <li>● 30</li> <li>● 40</li> <li>● 50</li> <li>● 100</li> </ul> <div style="border: 1px solid #ccc; padding: 10px; margin-top: 10px;"> <span style="color: #0070C0; font-size: 1.5em; margin-right: 10px;">i</span> <b>What is the default size?</b> <p>The default size set is 10. You may override this value by adding in your own message key value with the key being "<code>dbuilder.defaultPageSize</code>" in <a href="#">Manage Messages</a>.</p> </div>
Order	<p>Order sequence.</p> <ul style="list-style-type: none"> <li>● ASC - ascending</li> <li>● DESC - desending</li> </ul>
Order By	Column to be used for ordering / sorting.
Description	Datalist description meant for developer/admin consumption only to describe the purpose of this element.
Use session to store list state?	<p>If this option is checked, Joget will maintain the datalist settings previously set for the logged in user, on the following elements:</p> <ul style="list-style-type: none"> <li>* all column filter values.</li> <li>* page size.</li> <li>* page number position.</li> </ul> <p>The above run time datalist settings will not be changed by Joget as long as you are still logged in. Once you have logged out of Joget and logged back in again, all run time datalist settings will be reset to the default. By default, meaning if the page size was set by design to be '50' rows in Datalist Builder, it will now revert back to '50' rows. All column filters will be blank, unless by design you have entered a default value in column properties.</p>
Only show data when filters are submitted?	When checked, Joget Workflow will only display the datalist results after the user input the filter values and click the 'Show' button.
Consider filter value when get total size?	Include the filter value when displaying the total records in the menu.

## Responsive Setting

The following setting only applicable for theme supporting responsive UI.

### Responsive Setting

The following setting only applicable for theme supporting responsive UI.

Disable responsive feature?
