Userview Properties

Configure Layout

Configure Layout > Theme (Enterprise Theme) > Configure Permission > Login Page UI > Mobile Options

Theme	Enterprise Theme
Mobile View Disabled	☐
Description	

Figure 1: Userview Properties

Name	Description
Theme	Select a theme to render the Userview
Mobile View Disabled	When checked, the Userview will not appear in the listing in mobile view.
Description	Userview description meant for developer/admin consumption only to describe the purpose of this element.

Configure Permission

Configure Layout > Theme (V6 Universal Theme) > Configure Permission

Hide this Userview in App Center?	☐
Permission Type	
Temporarily disable permission checking for testing?	☐

Figure 2: Userview Properties – Configure Permission

Name	Description
Hide this Userview in App Center?	When checked, this particular Userview will not appear in the App Center's listing.
Permission Type	Manage the permission on who to see this Userview. See Permission Control. **Configure Permission** Configure Layout > Theme (Blank Theme) > **Configure Permission** > Login Page UI > Mobile Options Permission Type Is Admin Is Anonymous Bean Shell Script Department Group Logged In User Organization Is Sub Level Userview User

Temporarily disable permission checking for testing?	When checked, all permission set to Userview and Userview Category will be bypassed. This is a convenient option for app designer to gain access to all menus for testing.

⊘ Important Note

Remember to turn this off once testing is done.

⊘ Important Note

This will not bypass permission set inside Form and Form Section.

A red colored label/icon denoting "Permission disabled for testing" will appear on the Userview in the App Center as well as in the Userview runtime itself.

Login Page UI

Configure Layout > Theme (Blank Theme) > Configure Permission > **Login Page UI** > Mobile Options

Custom HTML (Before Login Form)

Custom HTML (After Login Form)

Figure 3: Userview Properties – Login Page UI

Name	Description
Custom HTML (Before Login Form)	HTML code is expected here.
Custom HTML (After Login Form)	HTML code is expected here.

Mobile Options

Configure Layout > Theme (Blank Theme) > Configure Permission > Login Page UI > **Mobile Options**

General

Mobile Offline Cache Enabled	☐
