

Map Tools to Plugins

Introduction

Process Tool Plugin is used to execute **Tool** inserted as part of the process flow.

Also note that, you may simply insert **Process Tools** and execute immediately upon form submission. Read on how to use **Post Form Submission Processing** in Form Builder here: [Form Properties](#).

Map Participants to Users

Map Activities to Forms

Map Tools to Plugins

This is the list of tools defined in the Workflow design.

Notify Claimant Finance Verified
