Introduction

Counter Increment Tool is used to increase a **workflow variable** or an **environment variable** within a workflow. This can be handy for activities such as loops.

To use this tool correctly, you will need to place it within a loop in your workflow (a transition out of the tool, and later a transition that passes back into the tool).

Counter Increment Tool Properties

Name	Description
Type	<ul style="list-style-type: none">• Workflow Variable• Environment Variable
