Audit Trail

Introduction

Audit Trail gives administrators a log of actions performed by users across the system. **An audit log, also called an audit trail,** is essentially a record of events and changes. In Joget DX, connected apps across each network create logs based on events. Audit logs are records of these event logs, typically regarding a sequence of activities or a specific activity.

Log of action includes:

- Timestamp = Specific time of the performed scenario.
- Username = Individual username of the task.
- Method = methodology used such as update, modifying, etc.
- Message = Presents specific ID, Version, Status, etc.
- Class = Defines pinpoint java class mentioned in backend code.
