

Datasource & Profile

- [Introduction](#)
- [Datasource Properties](#)

Introduction

Datasource & Profile Settings management makes it easy for you to switch between different profiles that hold individual database settings. Only one active profile is allowed at any time. Joget Workflow is backed with [Hibernate](#) which enables it to connect to major RDBMS (Relational Database Management System). Out of the box, the Joget installer comes embedded with MySQL DBMS but it may be connected to other RDMBS easily such as **Microsoft SQL Server, Oracle**, and so on.

Datasource Properties

Name	Description	Screen (Click to view)
Select Profile	Profile selection for saved database profile	Figure 1: Datasource & Profile
Driver Name	Database driver class path	
URL	JDBC connection string	
User	Database credential - Username	
Password	Database credential - Password	

Supported Databases

- By default, Joget is preloaded with **MySQL**, **Oracle**, and **Microsoft SQL server** JDBC drivers. You may add in other libraries as needed.
- Datasource & Profile is not available if you are on Joget Cloud.
