

DateUtil

- [Description](#)
- [Code Sample](#)
- [Methods](#)
 - [compare](#)
 - [validateDateFormat](#)

Description

- org.joget.commons.util.DateUtil
- Under wflow-commons module
- Utility methods to deal with date value

Code Sample

```
import org.joget.commons.util.DateUtil;

String dateValue = "2015-06-01";
String format = "yyyy-MM-dd";

//check the format
boolean valid = DateUtil.validateDateFormat(dateValue, format);
```

Methods

[compare](#)

```
public static boolean compare(String start, String end, String format)
```

To check an end date is after a start date. Format following syntax of java.text.SimpleDateFormat.

[validateDateFormat](#)

```
public static boolean validateDateFormat(String value, String format)
```

To validate a date value is in correct date format. Format following syntax of java.text.SimpleDateFormat.
