

Date Picker Field - i18n

Objective:

To localize the Date Picker field to a specific language

Example 1:

The example below uses "zh-CN".

You can download the i18n jQuery library for Date Picker from <http://code.google.com/p/lisr/source/browse/#svn%2Ftrunk%2Flisr%2Flib%2Fjs%2Fui%2Fi18n>.

```
<script type="text/javascript" src="http://lisr.googlecode.com/svn/trunk/lisr/lib/js/ui/i18n/ui.datepicker-zh-CN.js" ></script>
<script type="text/javascript">
  $(document).ready(function(){
    $.datepicker.setDefaults($.datepicker.regional[ 'zh-CN' ] );
  });
</script>
```

Example 2:

The next example uses French "fr"

1. Search for a jQuery Date Picker for French i.e <https://gist.github.com/corsont/4306287#file-jquery-ui-datepicker-fr-js>
2. download the file
3. upload said file to the relevant app. Design App > Properties & Export > Add Resource
4. Click the file in the Resource tab and take note of its hash variable (for example it would be something like #appResource.jquery.ui.datepicker-fr.js#)
5. Then where the Date Picker is located, drag and drop the custom HTML and paste the following code

```
<script type="text/javascript" src="#appResource.jquery.ui.datepicker-fr.js#"></script>
<script type="text/javascript">
  $(document).ready(function(){
    $.datepicker.setDefaults($.datepicker.regional[ 'fr' ] );
  });
</script>
```
