Add a new Row in Form Grid using script

1. Determine the Form Grid Field ID. In this example, it is "entries".

dit Form Grid 🕜						
dit Form Grid > UI > Validat	ion & Data Binder					
D *	entries					
abel						
Form *	HR Expense Claim	Entry	X v	ď		
Columns 🕢	FIELD ID *	LABEL	FORMAT TYPE	FORMAT	WIDTH	
	date	Date	Text *			◎ ♥ 8
	category	Category	Text *			000
	purpose	Purpose	Text *			000
	formattedAmoun	Amount	Text *			0 0 0
	0					

2. Construct the JSON object that correspond to the item row's form.

General Expense Entry		
Category	~	name: category
Date *	YYYY-MM-DD	🔳 name: date
Purpose *		name: purpose
Amount *		name: fomattedAmount

Code
<pre>var args = new Object(); args['result'] = '{"amount":"1","category":"Medical","claim":"","purpose":"a","date":"11/18/2015"," formattedAmount":"\$ 1.00"}';</pre>

3. Based on the identifier in #1, call the FormGrid's add method to add a new row.

```
// the field id is "entries"
var field = FormUtil.getField("entries");
var functionName = window[field.attr("id") + "_add"];
if(typeof functionName === 'function') {
    var args = new Object();
    args['result'] = '{"amount":"1","category":"Medical","claim":"","purpose":"a","date":"11/18/2015","
formattedAmount":"$ 1.00"};
functionName(args);
}
```

Code
