Figure 2: ID Generator Field Properties

ID	Element ID
Label	Element Label
Environment Variable Name	Name of the environment variable to be used to keep the running number
Format	Determines the pattern of the generated value (e.g., "REF-?????" will yield "REF-00001")
Hidden?	Determines if the element should be made visible in the form

You may map the generated value of this element to a workflow variable.

Read more about [Workflow Variables](#).

## FAQs

1. The format is REF-??? and the last value is REF-999, what will be the next generated string/number?

The next generated value will be REF-1000. The ? symbol is mainly used to fill up the leading zeros in a number.
