Font Awesome Icons

- Introduction
- Example Usage
- How To Get The Full FontAwesome Classes
- Add Your Own Fontawesome Library

Introduction

Font Awesome is a font and icon UI toolkit based on CSS and LESS, which you can add into your Joget app, especially the userview menus. Joget DX includes the Fontawesome v5.8.1 & v4.6.1 libraries.
The Font Awesome code for Joget logo is "".

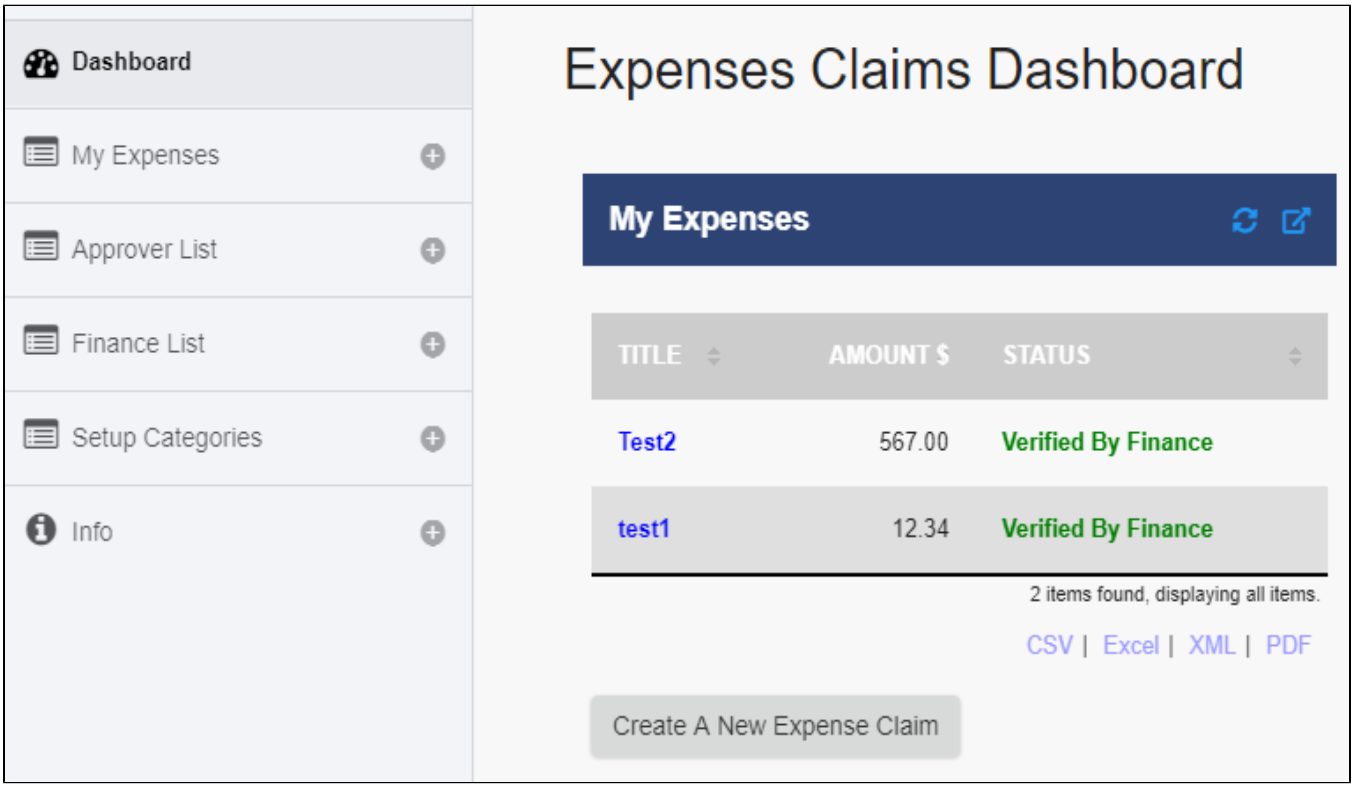

Figure 1: Joget app menus with prefix Fontawesome icons.

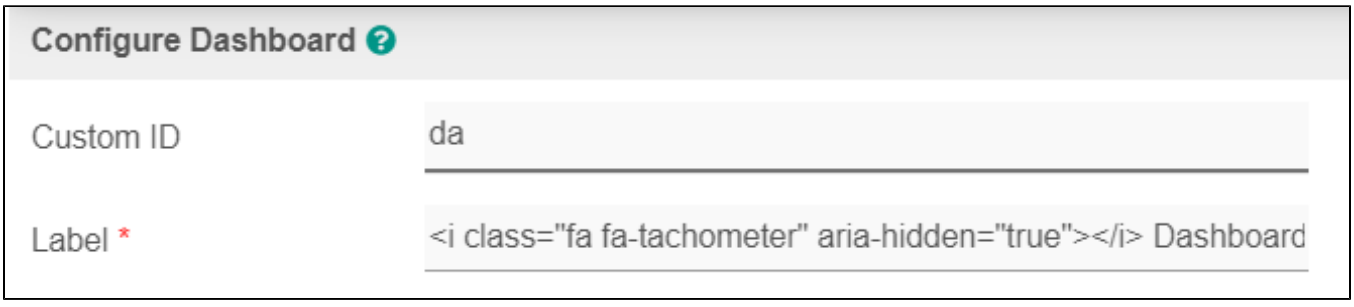

Figure 2: Example adding Fontawesome HTML codes into Userview menus.

Example Usage

Here are some usage examples for Fontawesome 5:

```
<i class="fas fa-home"></i><br/>
<i class="far fa-bookmark"></i><br/>
<i class="fas fa-file"></i><br/>
```

How To Get The Full FontAwesome Classes

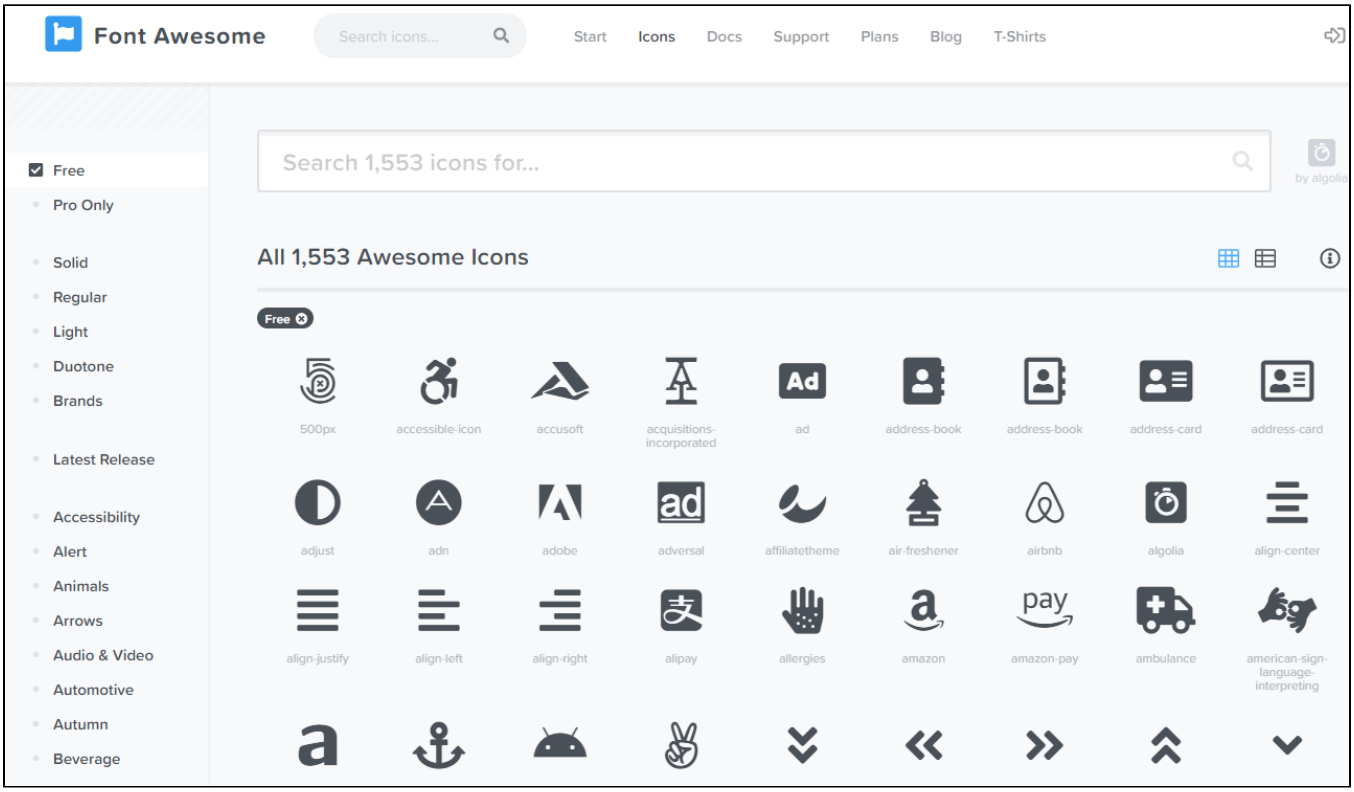

Figure 3: Fontawesome icon website

Reference the FontAwesome 5 icon codes from https://fontawesome.com/icons?d=gallery&m=free .

You can also view the FontAwesome icon codes names (example "fa-arrow-up") in the CSS source files in your Joget DX "[Joget folder]\apache-tomcat-8.5.41\webapps\jw\js\fontawesome5\css\" folder to know which icons are supported.

Add Your Own Fontawesome Library

You can add your own FontAwesome library into your app if you need a version that is newer than currently available in Joget DX, using the following syntax in Userview Custom Header (change the href="" url accordingly). Here is the "Font Awesome CDN reference":https://cdnjs.com/libraries/font-awesome/5.12.0-1 for "v5.12.0-1":

```
<link rel="preload" href="/jw/js/fontawesome5/fonts/fontawesome-webfont.woff2?v=4.6.1" as="font" crossorigin />
<link rel="preload" href="/jw/js/fontawesome5/webfonts/fa-brands-400.woff2" as="font" crossorigin />
<link rel="preload" href="/jw/js/fontawesome5/webfonts/fa-solid-900.woff2" as="font" crossorigin />
```
