

Userviews, Forms, Lists, and Processes

A **Userview** is a front-end UI for an app. End users access the App and consume its functionality through the Userview. An app may contain 1 or more Userviews. Userviews can have different themes, and consist of menu pages that contain forms, lists, reports, graphs, HTML content, etc.

Forms are used to capture and present information. Many form elements are available, ranging from a simple textfield to more complex types such as form grids.

In the sample HR Expenses Claim App, login as a normal employee (**Cat**) and click on the **New Expenses Claim** to see an expenses claim form. Fill up the form and click on **Complete** to submit.

The task created shows a **workflow process** in action, where a task is routed to the appropriate person.

The process may also involve integration to external systems such as sending emails or updating external databases.

As Clark, click on the **Approve Claim** link to view and approve Cat's submission.
